

Multiple Biometric Grand Challenge Kick-Off Workshop

18 April 2008

National Institute of
Standards and Technology

NIST

...working with industry to foster innovation, trade, security and jobs

MBGC Sponsors

Executing Agency

Sponsoring Agencies

The MBGC Team

- NIST
 - P. Jonathon Phillips, Test Director
 - Elaine Newton
- Colorado State University
 - Ross Beveridge & Geoff Givens
- SAIC
 - Todd Scruggs
- Schafer Corporation
 - Cathy Schott
- University of Notre Dame
 - Kevin Bowyer & Patrick Flynn
- University of Texas at Dallas
 - Alice O'Toole

Overview

- Background
- MBGC Overview
 - MBGC Goal
 - MBGC Structure
 - Challenge Problem Descriptions
 - How to get the MBGC Data

Challenge Problems

- What are challenge problems?
 - A series of experiments designed to advance a technology's state-of-the-art
 - Experiments designed
 - Experiments and test data distributed to researchers
 - Researchers complete experiments and submit results
 - Scores are consolidated and reported
 - Introduction of new technology
 - Specific to MBGC

Challenge Problem

- What is provided to participants
 - Data (biometric samples)
 - Ground truth (subject ids)
 - Experiment description
 - Score code
 - Standard results format
- What is requested from participants
 - Submission of results

New Technology Development

- Very high resolution Near Infrared (NIR) portal sequences
- Iris video
- Fusion of multi-modal video
- Unconstrained face recognition
- Realistic mug shot and passport images

What to Expect from the MBGC

- MBGC will determine performance improvement on face and iris recognition
- Results will measure:
 - Improvement obtained from video
 - If more samples of existing mode improve performance
 - Effect of resolution on still face
 - Improvement obtained through fusion of face and iris

Background

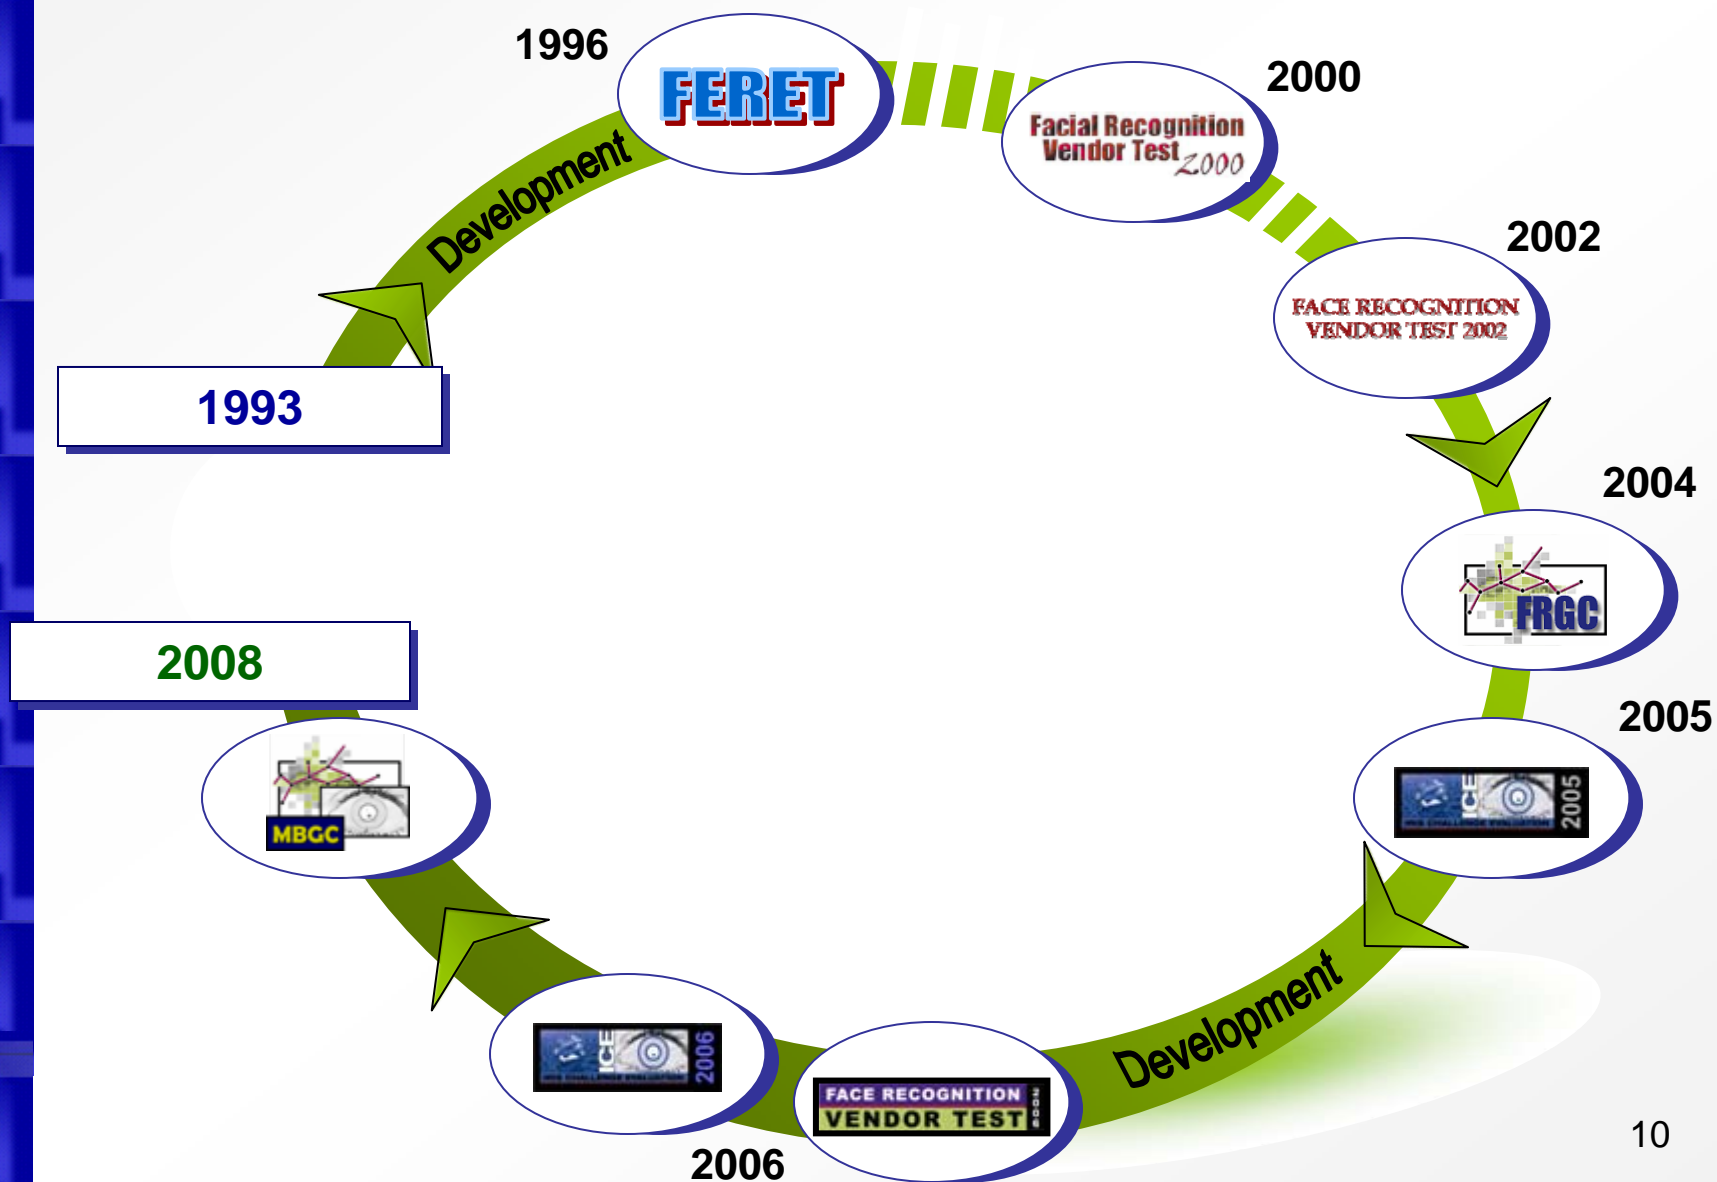

- FERET 1993-1997
 - Army Research Lab challenge problem/evaluation
- Face Recognition Vendor Test (FRVT) 2000
 - DARPA, NIST, DoD CTD and NIJ Evaluation
- FRVT 2002
 - DARPA, NIST and DoD CTD Evaluation
- HumanID Gait Challenge 2002-2003
 - DARPA Challenge problem
- Face Recognition Grand Challenge 2004-2006
 - NIST directed challenge problem
- FRVT 2006
 - NIST directed evaluation
- Iris Challenge Evaluation (ICE) 2005-2006
 - NIST directed challenge problem and evaluation
- Multiple Biometrics Grand Challenge (MBGC) 2008
 - NIST directed challenge problem

Iris Recognition

- ICE 2005 and 2006
 - First challenge problem and independent technology evaluation on multiple algorithms
 - Provided performance baseline
 - Patent expiration allowed broader technology development

What does progress mean?

- FERET, FRGC and FRVT 2006
 - Controlled images:

What about iris recognition?

- ICE 2006 images

- MBGC type images

What about these images?

- MBGC plans to address these types of images:

Multiple Biometric Grand Challenge

MBGC Goal

- The main goal of the Multiple Biometric Grand Challenge (MBGC) is to
 - Address face and iris recognition problems that are more relevant to those found in operational data
 - Low to medium resolution face
 - Still and video iris
 - Near Infrared (NIR) & High Definition (HD) video from portals
 - Unconstrained face recognition from still & video

MBGC Goal

- Programmatic Method
 - Sequence of challenge problems
 - Modeled after the FRGC and ICE 2005
 - Challenge problems and data distributed to researchers
 - Workshops
 - Planned independent technology evaluation

Timeline

- Estimated Task Schedule for MBGC:

Estimated Schedule	Task
December 2007	Formal announcement of MBGC project Begin data collection at University of Notre Dame Design protocols, challenge problems and prepare test infrastructure
April/May 2008	1st MBGC Workshop Release 1st challenge problem
October 2008	2nd MBGC Workshop Self-reported results on Challenge Problem 1 presented Release 2nd Challenge Problem
Spring 2009	3rd MBGC Workshop Self-reported results on Challenge Problem 2 presented
Spring/Summer 2009	Planned Multi-Biometric Evaluation (MBE) 2009 (Option)

MBGC Challenge Problems

Worked with sponsors over a 12-month period to define problems

Standard

Portal Challenge Problem

Portal Video

Mugshot

ICAO-ISO
Standard

Motivations

- Rapid acquisition of biometrics at points of entry
- Non-invasive capture

Portal Goals

- Algorithm development
 - Biometrics: face and iris
 - Modes: iris video, NIR video, HD video

Meet the Sensors....

Meet the LG 2200

MBGC Iris Acquisition System

- Take 3 iris images
- One above quality threshold
- Save all three

Experiment Terminology

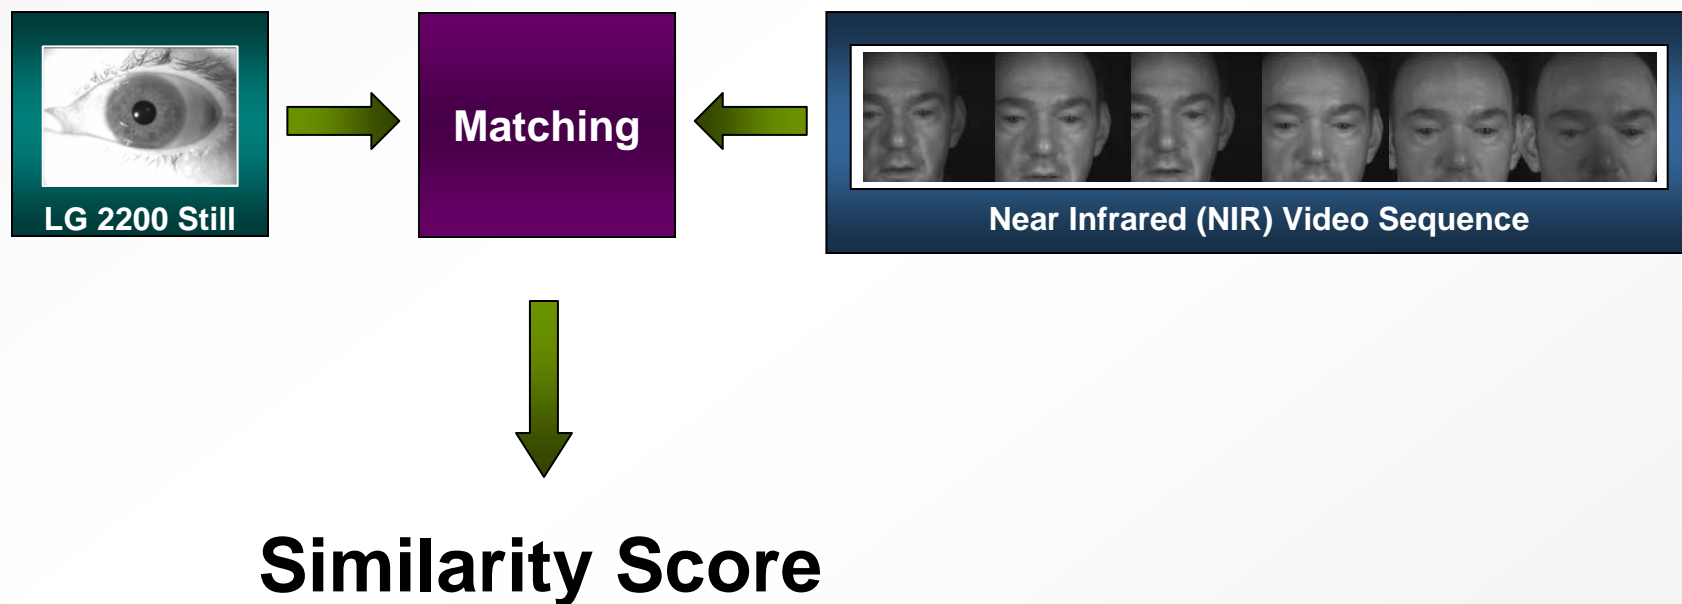

Target

- Enrolled image

Query

- Image to be recognized

Experiment: Still Iris versus NIR

Experiment: Still Iris versus NIR

Ground truth provided: Subject ID

Note: Input will be full video sequence

↓
Similarity Score

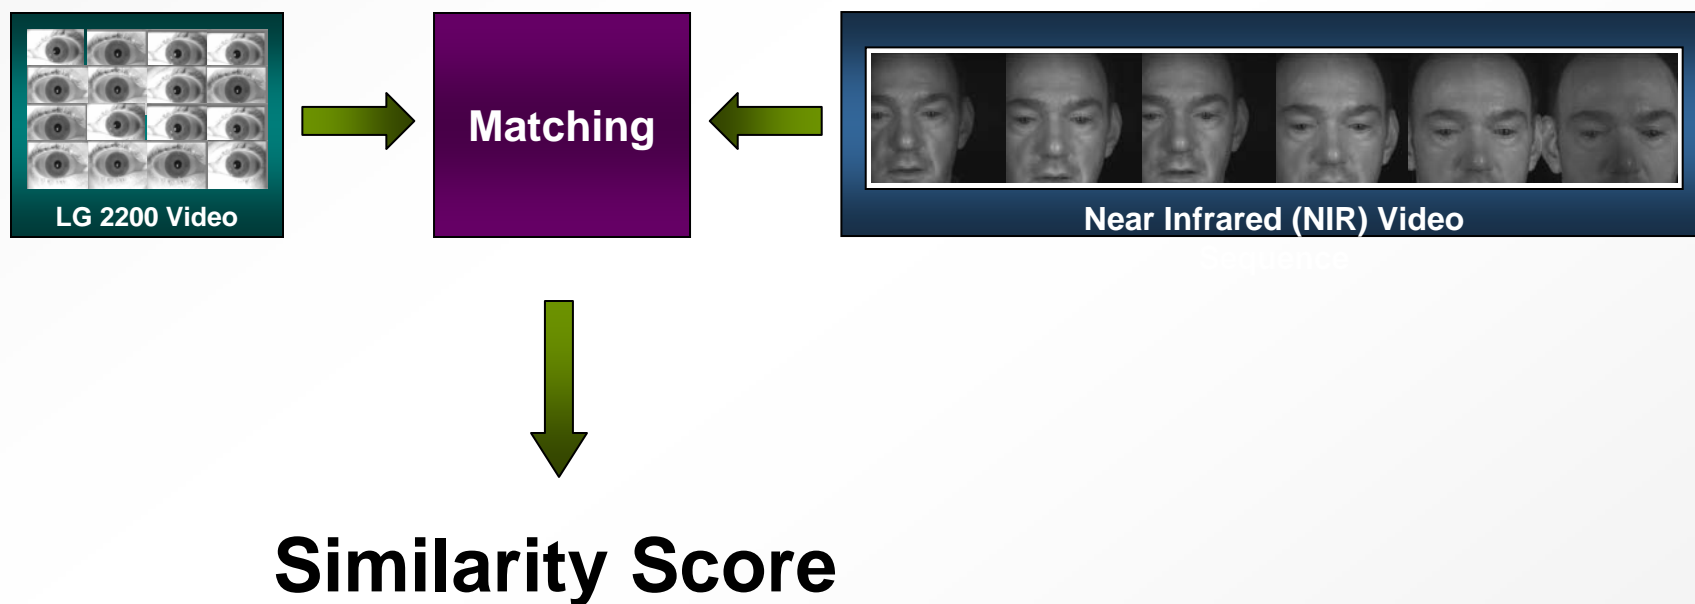

- Algorithm will need to:
 - Process Video
 - Locate Irises
 - Segment Irises
 - Generate Template or other Representation

Meet the LG 2200 again....

Iris Video Sequence

Experiment: Video Iris versus NIR

Experiment:

Video Iris versus NIR

Both inputs will be full video sequences

- Algorithms will need to:
 - **Process Video**
 - **Locate Irises**
 - **Segment Irises**
 - **Generate Templates or other Representation**

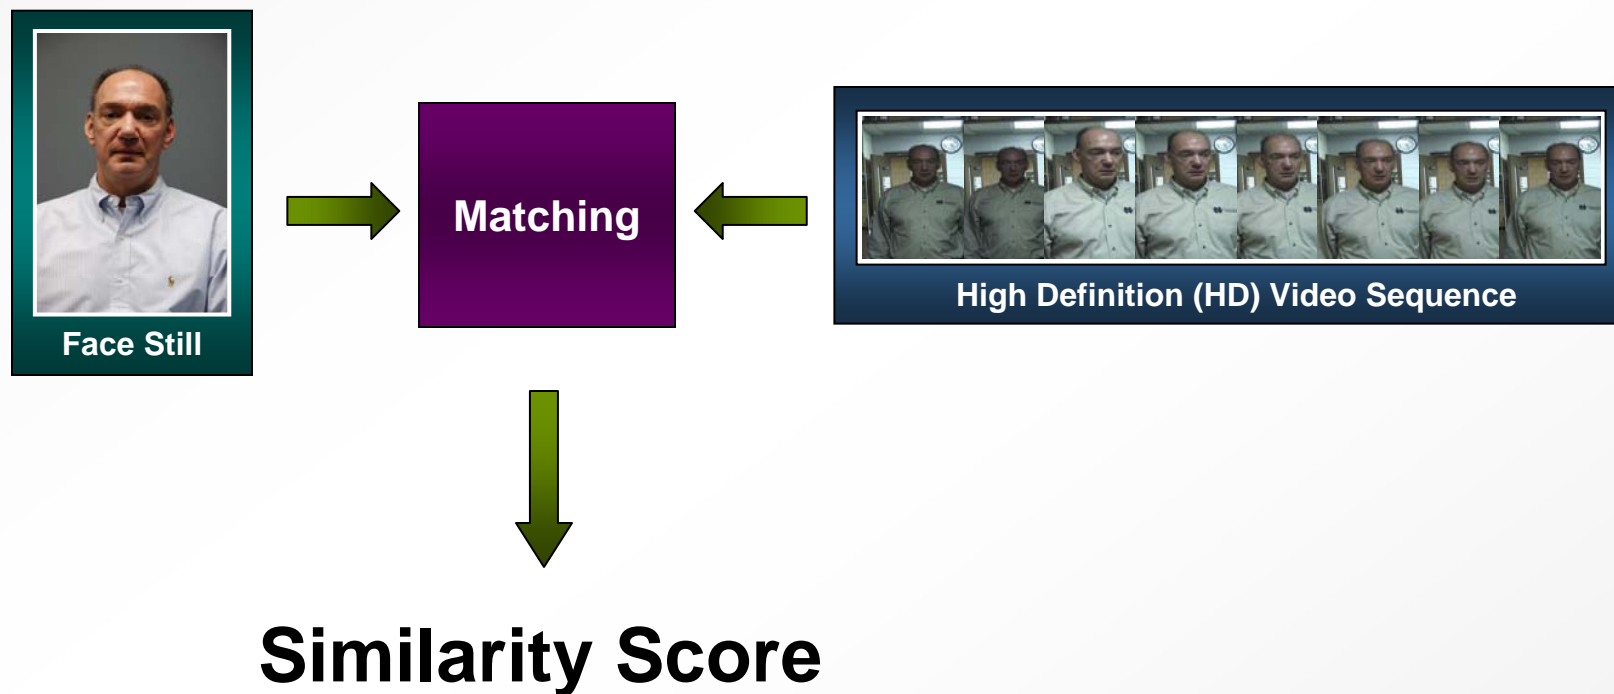

Meet the Portal again....

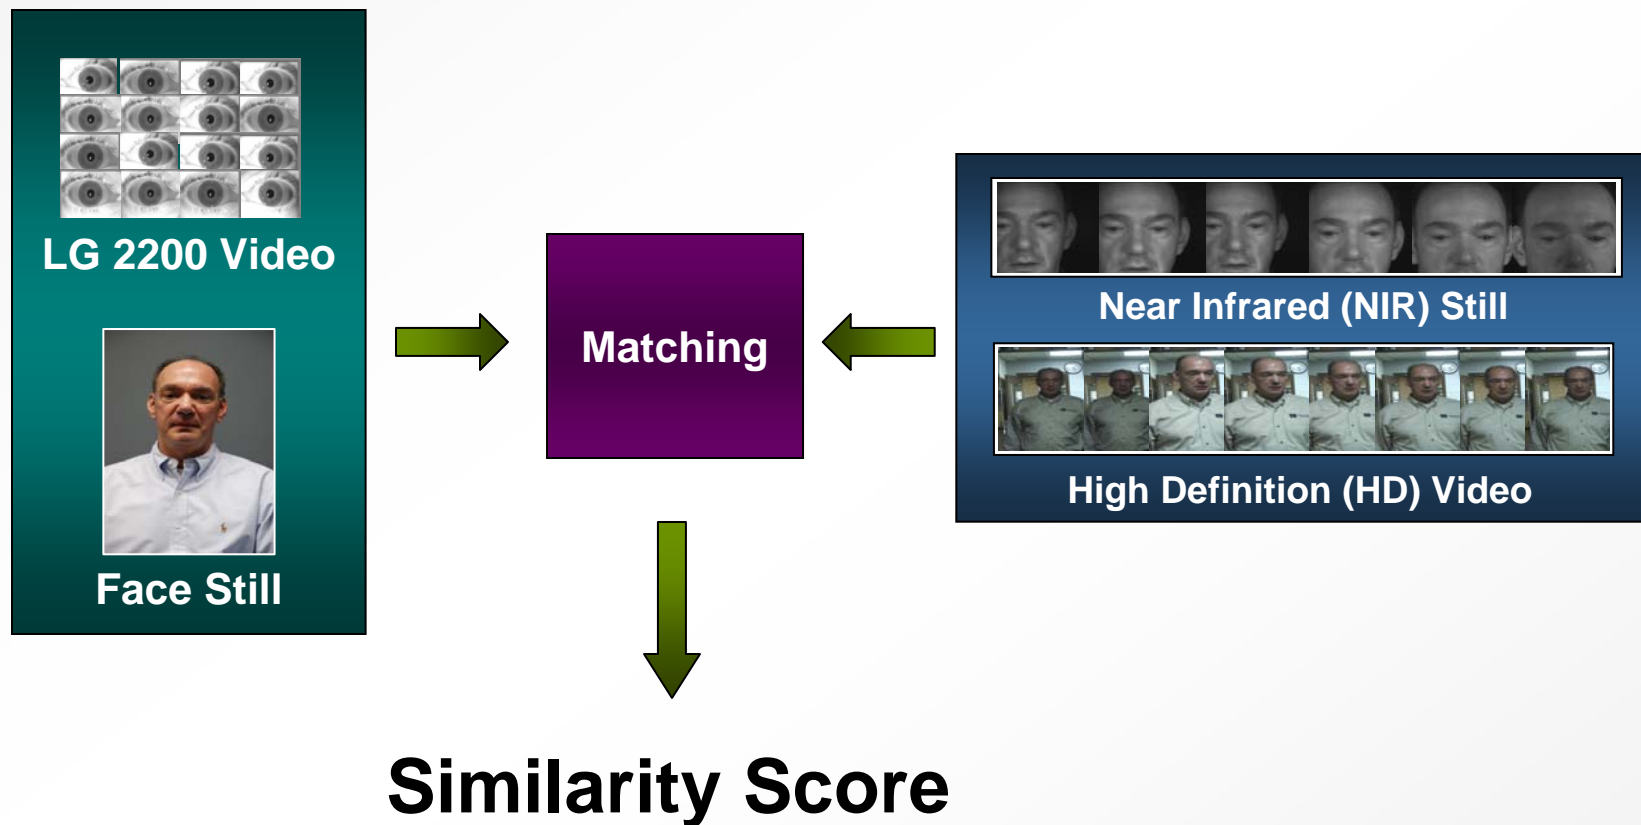

High Definition (HD) Video Sequence

Experiment:

Still Face versus HD Video Face

Experiment: Multiple Biometrics

Experiment: Multiple Biometrics

Input is iris video
sequence and face still

Input is both video sequences

- Algorithms will need to:
 - Process all video sequences
 - Generate templates or other representation
 - Decide fusion strategy

Quick Summary

LG 2200 Still

Still Iris versus NIR

Near Infrared (NIR) Video Sequence

Portal Summary

- Introduce new technology
- Seven experiments
- Multiple biometrics
- Assess impact of fusion

Still Face Challenge Problem

Still Face

Mugshot

ICAO-ISO Standard

Standard

Frontal Face

- FERET, FRGC and FRVT 2006
 - Controlled images:

Frontal Still Face

- Unconstrained Illumination:
 - High resolution camera
 - 4 and 6 megapixels
- Images for mug shots, passports and credential cards
 - Face size 90-120 pixels between the eyes compressed to 8k and 20k
 - ISO/IEC Standard

Still Face

- Two target sets – AY03-04 (FRGC)
 - Controlled Illumination Frontal
 - 16,028 images
 - Uncontrolled Illumination Frontal
 - 8,014 images
- One query set – AY04-05
 - Uncontrolled Illumination Frontal
 - 13,785 images
 - Outdoors
 - Hallways and Atriums

Experiment:

Still Face versus Still Face

Target Set

Query Set

Target Set

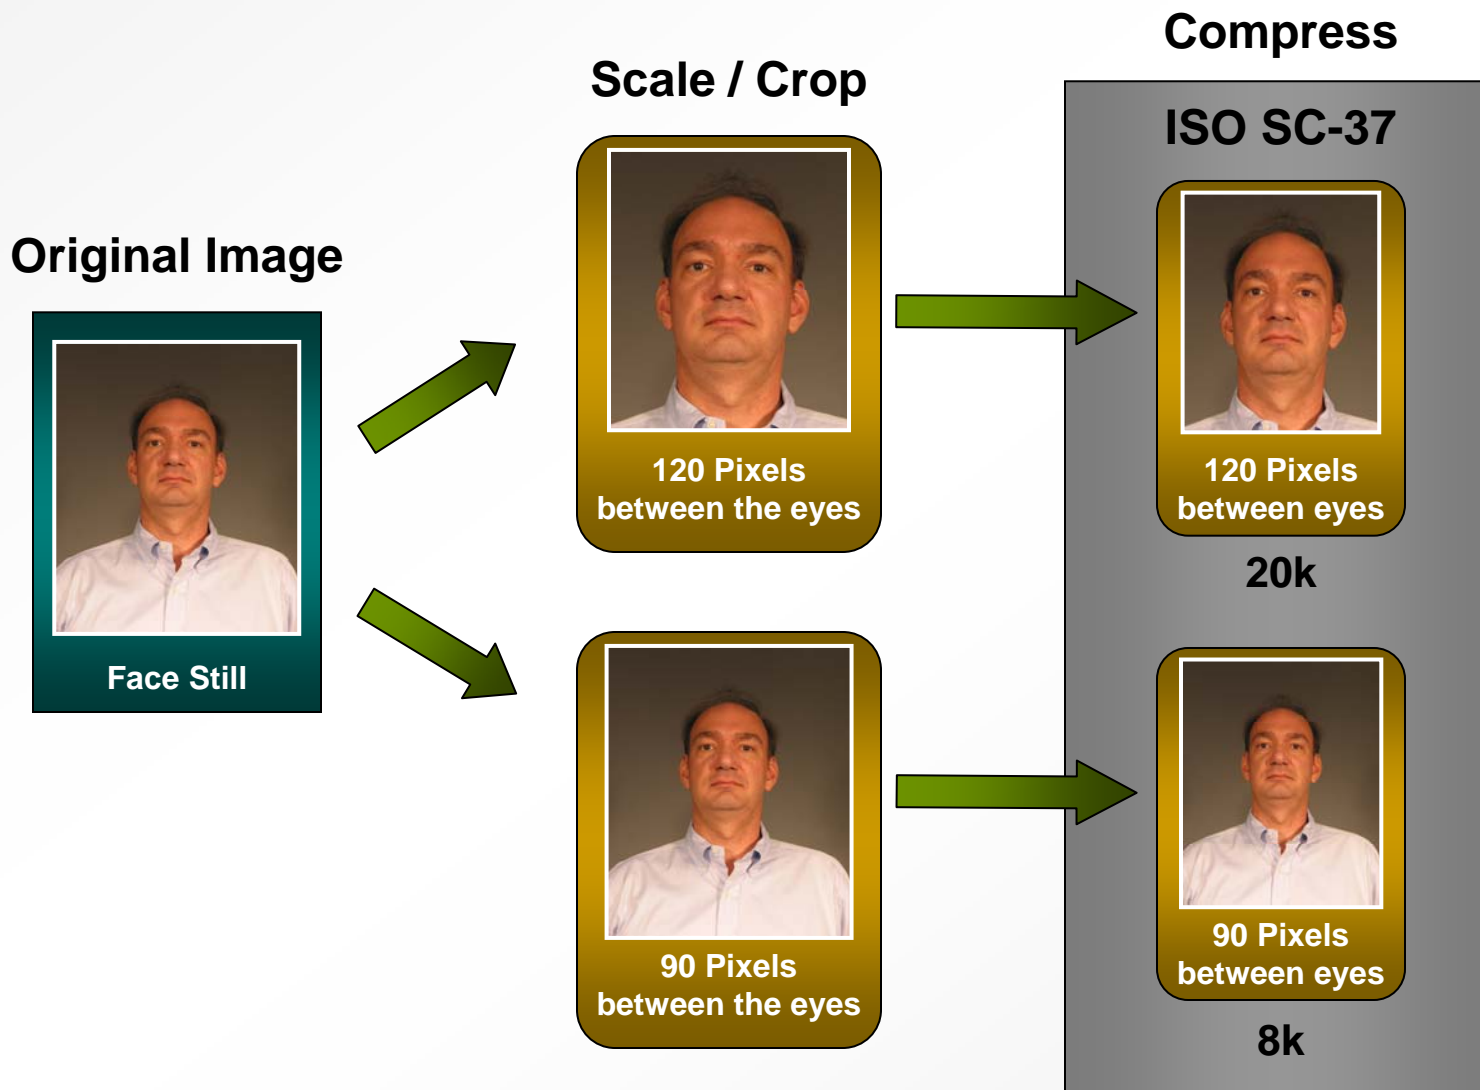

Query Set

Effects of Lower Resolution and Compression on FR

- Determine effect of
 - Lower resolution
 - Compression
- Process original images to meet data requirements
 - Scale and crop
 - 120 and 90 pixels between the eyes
 - Compress images
 - 20k and 8k

Still Face Processing

Experiment: Still Face Compression 1

Compressed: 120 pixels between eyes, 20k

Target Set

Query Set

Target Set

Query Set

Experiment: Still Face Compression 2

Compressed: 90 pixels between eyes, 8k

Face Video

Target

Query

Video Summary

- Video to video
- Addressing unconstrained face recognition

Quality

Motivations

- Ensure control over enrollment processes
 - Do you get images that give you good matches?
- Confidence level in matching for degraded images
 - Reliability in producing a good match
 - What constitutes a good quality measure?

MBGC Mechanics

Timeline

- Estimated Task Schedule for MBGC:

Estimated Schedule	Task
December 2007	Formal announcement of MBGC project Begin data collection at University of Notre Dame Design protocols, challenge problems and prepare test infrastructure
April/May 2008	1st MBGC Workshop Release 1st challenge problem
October 2008	2nd MBGC Workshop Self-reported results on Challenge Problem 1 presented Release 2nd Challenge Problem
Spring 2009	3rd MBGC Workshop Self-reported results on Challenge Problem 2 presented
Spring/Summer 2009	Planned Multi-Biometric Evaluation (MBE) 2009 (Option)

What is provided by us....

- Challenge problem data
- Subject IDs
- XML sigset description
- Common results format
- Classes to read/write formats
- Scoring code
- Bash script for running experiments
 - Same arguments as FRVT 2006 & ICE 2006

General Rules for Submitting

- Submit
 - Matching results (Similarity matrix)
 - Quality scores [optional]
- Can submit subset of experiments
- NIST reserves right to attribute performance

Challenge Problems and Data Distribution

- Challenge problems and the first MBGC data set will be released sequentially starting 1 May 2008
- To obtain data, you will need to submit data licenses signed by proper legal authorities
- Instructions for requests will be posted on MBGC website at <http://face.nist.gov/mbgc>

Estimated Size of Challenge Problems

- Portal
 - 600 video sequences
 - 1400 stills
 - 100 Gigabytes
- Still face
 - 150,000 stills
 - 75 Gigabytes
- Video face
 - 1500 video sequences
 - 1500 stills
 - 150 Gigabytes

Challenge Problems and Data Distribution

- What is the method of distribution?
 - Downloadable via rsync
 - Instructions for downloading data will be distributed after
 - Data licenses have been properly signed and submitted and your request has been processed

Summary

- Multiple Biometric Grand Challenge (MBGC)
- Three challenge problems
- Multiple biometrics for portals
- Towards unconstrained face recognition
